//Clone lib="Site_2: XhoI (3' linker primer); The mixed
(5' adaptor); Site_2: XhoI (3' linker primer); The mixed
organ cDNA library was generated using the ZAP-cDNA method
by Stratagene. First strand cDNA synthesis was primed with
a a 50 bp linker primer containing an oligo dT sequence
preceded by a synthetic XhoI site. 5 prime adaptors were
used containing an EcoR1 cohesive end. The finished cDNAs
were inserted in to the ZAP express vector
unidirectionally in the sense orientation with respect to
the lac2 promoter of pBK-CMV. An amplified library was
prepared from approximately 3 million primary clones in
the lambda ZAP Express vector. In vivo excision was then
used to generate individual pBK-CMV phagemid clones for
EST sequencing."

/note="Vector: lambda ZAP Express/pBK-CMV; Site 1: EcoRl
/note="Vector: lambda ZAP Express/pBK-CMV; Site 1: EcoRl
(5' adaptor); Site 2: XhoI (3' linker primer); The mixed
organ cDNA library was generated using the ZAP-cDNA method
by Stratagene. First strand cDNA synthesis was primed with
a a 50 bp linker primer containing an Oligo dT sequence
preceeded by a synthetic XhoI site. 5 prime adaptors were
used containing an EcoRl cohesive end. The finished cDNAs
were inserted in to the ZAP express vector
unidirectionally in the sense orientation with respect to
the lac2 promoter of pBK-CMV. An amplified library was
prepared from approximately 3 million primary clones in
the lambda ZAP Express vector. In vivo excision was then
used to generate individual pBK-CMV phagemid clones for
EST sequencing."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                constructed by Nigel Garrett.

cDNA was oligo dT primed from 5ug of poly A+ RNA from tadpole embryos. EcoRI-NotI cut cDNA was then ligated into pCS107 will EcoRI at the 5' end and NotI at the 3' end.

Vector: pCS107; Site 1: EcoRI; Site 2: NotI

Host: Escherichia coli DH10B.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       constructed by Aaron M. Zorn.
CDNA was oligo dT primed from 5ug of poly A+ RNA from neurula.
ECORI-NotI cut cDNA was then ligated into pCS107 with ECORI at
5' end and NotI at the 3' end.
Vector: pCS107; Site 1: ECORI; Site 2: NotI
Host: Escherichia coli DH10B
Sanger Xenopus tropicalis EST project 2001
TROPICALIS_SEQUENCE_ID: TNeu035007.plkSp6
Sequencing primer: SP6.

The present sequence represents the Brevibacterium lactofermentum sucrose PTS (phosphoenolpyruvate:carbohydrate phosphotransferase system or phosphoenolpyruvate-sugar transport system) enzyme II, which has sucrose-binding activity. A coryneform bacteria produced with the sucrose PTS enzyme II gene can have more efficient sugar uptake, and improved aminoacid and nucleic acid productivity. The sucrose PTS gene and it's acid productivity. The sucrose PTS gene and it's disrupted gene, such as one without the sucrose PTS function, can be used to produce new breeds of coryneform bacterial strains to uptake sugar more efficiently e.g. glucose only or and sucrose, and can have improved

Gene encoding sucrose phosphoenolpyruvate-sugar transport system enzyme II obtained by cassette ligation-mediated amplification of downstream domain of coryneform bacterium sucrase gene, with sucrose-binding

These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacterium and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino particularly L-lysine. The present sequence is a protein described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office

                                                                                                                                                                                                                 The present invention relates to Corynebacteium glutamicum phosphoenolpyruvate: sugar phosphotransferase system (PTS) proteins. The PTS nucleic acids and proteins are useful in the identification of microorganisms which can be used to produce fine chemicals, for modulating fine chemical production in C. glutamicum or related bacteria, as the typing or identification of C. glutamicum or related bacteria, as reference points for mapping C. glutamicum genome, and as markers for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Corynebacteium glutamicum nucleic acids encoding phosphoenolpyruvate: sugar phosphotransferase system proteins or their portions, useful fo typing or identifying C. glutamicum or related bacteria, and as marke

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (e.g. amino acids, vitamins, cofactors, nucleotides and nucleosides, or trehalose). The polynucleotide sequences encoding the MP proteins are useful for producing fine chemicals, particularly organic acids, non-proteinogenic amino acids, purine and pyrimidine bases, nucleosides, nucleotides, lipids, (un)saturated fatty acids, diols, carbohydrates, aromatic compounds, vitamins, cofactors, polyketides and enzymes. The fine chemicals are useful in the food, animal feed, cosmetic or pharmaceutical industries. ABG80321-ABG80343 represent the C. glutamicum MP proteins of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to the isolation of Corynebacterium glutamicum metabolic pathway (MP) proteins, and the polynucleotide sequences encoding them. The MP proteins are enzymes involved in the metabolism of melecules important for the normal functioning of cell.

The property nucleic acids and proteins are useful in the identification of microorganisms which can be used to produce fine chemicals, for modulating fine chemical production in C. glutamicum or related bacteria, as the typing or identification of C. glutamicum or related bacteria, as reference points for mapping C. glutamicum genome, and as markers for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    and polypeptides. The nucleic acids and proteins are useful for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, such as S. pneumoniae infection. These may also be used for drug screening procedures. The present sequence represents a Streptococcus pneumoniae polypeptide of the invention. Note: The sequence data for this patent did not appear in the printed specification but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid molecules and polypeptides useful for diagnosing preventing and treating pathological conditions resulting from ba

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                              The invention relates to an isolated nucleic acid comprising a sequence encoding a Streptococcus pneumoniae ADR9136polypeptide, or its fragments, with any of 9 fully defined sequences (appearing as ADR94308, ADR94499, ADR94800, ADR94837, ADR94969, ADR95253, ADR95642, ADR95682, ADR946079) or any of the fully defined sequences appearing as ADR91705, ADR91886, ADR92197, ADR92234, ADR93039, ADR93079, ADR92366, ADR92650 or ADR93186, ADR92197, ADR923234, ADR93039, ADR93079, ADR92366, ADR92650 or ADR93186 or at least 20 or 30 consecutive nucleotides of the nucleotide sequences, or at least 40, 60 or 300 consecutive nucleotides, which is hybridisable under high stringency conditions to the nucleotide sequences. The nucleic acids and proteins are chosen from 5206 disclosed sequences. Also included are a recombinant expression vector comprising the isolated nucleic acid cited above operably linked to a transcription regulatory.
sequences as cited above. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment o pathological conditions resulting from bacterial infection by
                                                  element, a cell comprising the recombinant expression vector and a probe comprising at least 20 consecutive nucleotides of the nucleotide
                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic acid encoding a Streptococcus pneumoniae polypeptide, useful for diagnosing, preventing and/or treating pathological conditions resulting from the bacterial infection
                                                                                                                                                                                                                                                                                                                      Disclosure; SEQ ID NO 3250; 151pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       producing an E. faecalis polypeptide, an isolated nucleic acid comprising a sequence not given in the specification, a recombinant vector comprising the nucleic acid and a cell comprising the recombinant vector. The polynucleotides can be used to detect the presence of E. faecalis in a sample. The sequences are useful for preparing a composition for diagnosing or treating Enterococcus faecalis infection. This sequence represents an E. faecalis polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to Enterococcus faecalis polynucleotides and polypeptides. The invention also relates to a recombinant expression vector comprising a polynucleotide operably linked to a transcription regulatory element, a cell comprising a recombinant vector, a method for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New nucleic acid comprising a sequence encoding polypeptide, useful for preparing a composition treating E. fecalis infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2003-895394/82.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                 The present invention relates to the genome sequence of Listeria CC monocytogenes ECD-e (see ABA0341). The genome sequence and fragments of CC it are useful for selecting probes and primers for detecting genes in L. CC monocytogenes and related organisms, and for studying genetic CC polymorphisms and other genomes. The present sequence is a protein CC encoded by the genome sequence of the present invention. Proteins CC expressed from the genome sequence are useful for raising specific CC antibodies, identification of L. monocytogenes and related organisms, and CC for biosynthesis and biodegradation, especially biosynthesis of Vitamin CC B12. The genome sequence and proteins encoded by it are also useful for CC selecting compounds that regulate gene expression and cell replication CC and modulate L. monocytogenes related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and CC waccines compositions for the treatment or prevention of infections by L. CC monocytogenes and related organisms. Note: The sequence data for this CC patent did not form at of the printed specification, but was obtained CC in electronic format directly from WIPO at

the 6213 antisense sequences given in the specification where expression (C) of the nucleic acid inhibits proliferation of a cell. Also included are: (C) a vector comprising a promoter operably linked to the nucleic acid (C) encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated (C) polypeptide or its fragment whose expression is inhibited by the nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway (C) identifying a compound that influences the activity of identifying a compound that influences the activity of a gene product or that has an activity against a biological pathway (8) identifying a compound that influences the activity of identifying a compound that influences the activity of a gene product or a gene on which a proliferation or that inhibits groliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for cellular proliferation to isolate candidate molecules for rational control did not form post of the nitrated specification, but was obtained this interest prokaryotic essential genes. Note: The sequence data for this chained

                    The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also pseudomonas aeruginosa and Enterococcus faecalis. The invention is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antisense; prokaryotic cellular proliferation antibacterial; drug design.

The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ftp.wipo.int/pub/published_pct_sequences

CC identity to any of the 2469 amino acid sequences, identified in the CC specification (available on a computer readable format), or its fragment, CC expressed from 2469 of 2489 identified by Acoding regions from the CC Streptococcus pneumoniae type 4 strain genomic sequence appearing as CC hass6454. Also included are an antibody which binds one of the proteins, CC treating a patient by administering the protein, DNA or antibody (in a CC composition), a kit comprising first and second primers, which are the CC sequence contained within a Streptococcus muclectides 8-100 of a CC sequence not defined in the specification, for amplifying a target sequence contained within a Streptococcus mucleic acid sequence, where CC the first primer is substantially complementary to the target sequence contained within a Streptococcus mucleic acid sequence, where CC the target sequence, and where the parts of the primers having CC substantial complementarity define the termini of the target sequence to be amplified, assay comprising contacting a test compound with the CC protein, and determining whether the test compound binds to the protein CC and a Streptococcus pneumoniae bacterium, where one or more genes cc encoding the proteins has been rendered inactive. The proteins, nucleic acid molecules, antibody and compositions are useful as medicaments for CC treating or preventing a disease or infection due to streptococcus bacteria, particularly S. pneumoniae, such as pneumonia, sepsis, otitis medica or ear infection. They are also useful in developing vaccines, cd diagnostics and antibiotics. The methods are useful as medicaments for CC diagnostics and antibiotics. The methods are useful as 2469 proteins CC expressed by the identified coding regions from the genomic sequence. CC Note: The sequence data for this patent did not form part of the printed CC specification, but was obtained in electronic format directly from MIPO CC at fig. 12 contains the sequence of the composition of the printed CC specification as obtained in ele
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New proteins and nucleic acid molecules from Streptococcus pneumoniae, useful as medicaments for treating or preventing a disease or infection due to streptococcus bacteria, such as pneumonia, sepsis, otitis media ear infection.
